APHIS Reopens Comment Period for Proposed Rule to Establish U.S. Swine Health Improvement Plan as a Federal Regulatory Program

[Print](#)

Stakeholder Announcement

Contact:

APHISPress@usda.gov

WASHINGTON, February 27, 2025 – The U.S. Department of Agriculture’s Animal and Plant Health Inspection Service (APHIS) is reopening the public comment period for a proposal to establish an official program for safeguarding, improving, and representing the health status of U.S. pigs.

Since 2020, APHIS, in cooperation with industry, has piloted the U.S. Swine Health Improvement Plan (US SHIP) aimed at certifying participating sites as monitored for African swine fever (ASF) and classical swine fever (CSF).

APHIS [recently announced](#) the proposed rule, which would build upon the pilot program and establish US SHIP as a national voluntary livestock improvement program. Under the proposal, APHIS would create sectors for various types of swine herds and production facilities centered on production methods and disease risk. Participating sites would be able to obtain certifications of disease-monitored status for ASF and CSF. These sites would be able to market their products with the relevant certification status, which could limit disruptions to international and interstate commerce in the event of animal disease outbreaks. Finally, as part of US SHIP, APHIS would establish a General Conference Committee composed of swine producers and other industry and state animal health participants to advise APHIS on matters of swine health and disease management.

Beginning tomorrow, we will accept public comments at www.regulations.gov/document/APHIS-2022-0061-0001. All comments must be submitted on or before March 31, 2025.

For more information about swine diseases or the existing US SHIP pilot program, visit the [APHIS website](#).
