August 1, 2025

Subject: APHIS Updates the Pale Cyst Nematode (*Globodera pallida*) Regulated Area in Idaho

To: State, Tribal, and Territory Agricultural Regulatory Officials

Effective immediately, the Animal and Plant Health Inspection Service (APHIS) is reducing the pale cyst nematode (*Globodera pallida*, PCN) regulated area by removing a 50.10-acre portion of a 56.28-acre PCN-associated field in Bingham County, Idaho.

APHIS is removing these acres because this land no longer meets the definition of an ‘associated field’ in accordance with [7 Code of Federal Regulations \(CFR\) §301.86-3\(c\)\(2\)](#); this 50.10-acre parcel is no longer in agricultural use.

The total number of PCN-regulated fields remains at 56, of which 31 are infested fields and 25 are associated fields. However, with these changes, the current PCN-regulated area in Idaho is 6,265.64 acres, of which 3,420.10 acres are infested fields and 2,845.53 acres are associated fields. The infested fields are within an 8.5-mile radius that spans a portion of northern Bingham County and southern Bonneville County.

APHIS will publish a notice of this change in the *Federal Register*. The [APHIS Pale Cyst Nematode](#) webpage lists the specific PCN-regulated areas.
