

Avery Template 5881
2.5" x 3" Business Card

Page 2 = Front of Pocket Card
Page 3- Back of Pocket Card

Instructions for printing:

- 1) Select only Page 2 and 3 to print
- 2) Select Both Sides/Double Sided
- 3) Select "Flip on Short Edge"
- 4) Recommend to use cardstock or heavy weight white paper

Protect Wildlife from New World Screwworm

New World screwworm (NWS) is a pest that poses a serious threat to wildlife and other animals by feeding on living tissue.

Know the Signs. Stay Alert.

- Maggots (larvae) in wounds or openings (nose, ears, navel, and genitals).
- Oozing wounds and/or foul smell.
- Animals in pain, irritated, or isolating themselves.

Report It.

- Document location (GPS), species, date, and wound description.
- Take photos/videos.
- Call USDA Wildlife Services immediately: 866-4USDA-W.S.

FIGHTING NEW WORLD SCREWORM

Know the Facts.

- NWS doesn't spread directly between animals or to people. It starts when female flies lay eggs in an open wound; larvae feed on living tissue.
- Not all maggots are NWS, but report any found on live animals.
- Prompt treatment helps animals recover. "Wildlife treatments are limited."
- Quick reporting protects wildlife and prevents spread.
